PROFESSIONAL SUMMARY

Final-semester Systems Engineering student at Universidad Industrial de Santander (graduating December 2026) with software running in production and in daily use by real businesses: an offline point-of-sale system for a pharmacy, a management platform for auto repair shops, and an OCR automation bot that cut report data-entry time by over 90 % at the university's School of Physical-Mechanical Engineering. I own the full cycle, from requirements gathering through deployment, user training and support. Based in Colombia (UTC-5), with full overlap with US business hours. English: intermediate (B1-B2). Available immediately, full-time, remote or on-site.

EXPERIENCE

Technical Assistant · Development & Automation

Jan 2025 – Dec 2025

Universidad Industrial de Santander · School of Physical-Mechanical Engineering (DIEF)

- **OCR automation for academic reports:** built a Python bot that extracts data from scanned documents and generates reports with no manual data entry. Cut processing time by over 90 %, handling 500+ documents per day at 98.5 % extraction accuracy.
- Provided technical support to staff and equipment across two academic terms.
- Managed and organized departmental data, produced reports, and supported the administrative and academic operations of the department.

Software Developer

Jan 2025 – Present

Client projects · Bucaramanga, Colombia

- **FarmaLite** — fully offline point-of-sale system for a pharmacy (PHP Desktop, SQLite3): inventory with low-stock alerts, cash-register closing, reporting, backups and receipt printing. Runs on older hardware, installs in under 5 minutes, and is used daily to operate the business.
- **MECANIX** — cross-platform management app for auto repair shops (**Flutter**, Supabase): centralizes work orders, inventory and customer history, syncs across devices, and applies OCR to repetitive data entry.
- **BarrioYa** — Progressive Web App for local commerce: JavaScript SPA with a custom router, Leaflet maps, a Chart.js KPI dashboard, GSAP animations, offline support via service workers, and continuous deployment on Vercel.
- **MONACO** — e-commerce catalog for a sportswear store, with inventory synced to the physical point of sale, WhatsApp checkout and responsive design.
- **Shopify migration** — moved a storefront from WooCommerce, built a custom theme on Dawn and integrated Meta Pixel for ad campaigns.

EDUCATION

B.Sc. Systems Engineering · final semester

2020 – Dec 2026

Universidad Industrial de Santander · Bucaramanga, Colombia

Thesis: Deep Learning applied to medical imaging.

TECHNICAL SKILLS

Languages	Python, PHP, JavaScript, Dart, SQL, HTML5, CSS3
Frameworks	React, Next.js, Flutter, Node.js, Tailwind CSS, jQuery, GSAP, Leaflet, Chart.js
Databases	PostgreSQL, Supabase, SQLite, Firebase
Automation & AI	OCR, Selenium, RPA & scripting, Machine Learning, Deep Learning
Platforms & DevOps	Vercel, Docker, Git & GitHub, CI/CD, Shopify (Liquid), PWA & service workers
Other	Point-of-sale systems, technical support, requirements gathering

LANGUAGES

Spanish — native · English — intermediate (B1-B2)
